CODABENCH: WORKING AND SUBMITTING IN PAIRS

Lab 4 AVCV 2026/2027 - Student guide

This project must be completed **in pairs**. Each student uses their own CodaBench account, and each pair creates **one organization** to represent the team. Both students must belong to that same organization.

Required team name: StudentID1_StudentID2. Replace both parts with your actual university student IDs, separated by one underscore, with no spaces. For example: **100000001_100000002**. Agree on one order and keep it consistent.

The name **NIA1_NIA2** shown in the screenshots is a placeholder. Use your real IDs when creating your organization.

1. OPEN THE ORGANIZATION MENU

- Both students should first have their own CodaBench accounts.
- One member of the pair signs in, opens the username menu in the top-right corner and clicks **Create Organization** under **ORGANIZATIONS**.
- Only one person needs to create the organization. The second student will be added to it in Step 4.

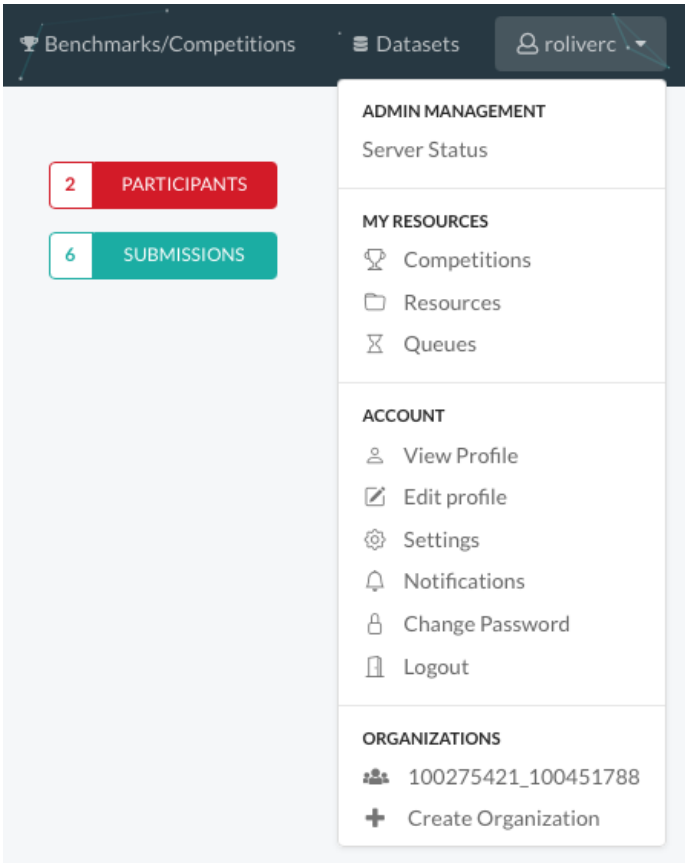

Figure 1. Open your account menu and select Create Organization.

2. CREATE YOUR TEAM'S ORGANIZATION

- **Organization Name:** enter **StudentID1_StudentID2** using the two actual student IDs. This is the team name that must be used in CodaBench.
- **Organization Email:** enter a real, working contact email address for the pair, such as one member's university email. One contact address is enough; each student still keeps their own personal account.
- The profile photo, location, description and social or website links are optional. You can leave them blank. Click **Submit** to create the organization.

The email **youremail@example.com** in the screenshot is an example. Replace it with your own contact address. If CodaBench shows **Please enter a valid Organization Email**, correct the email field and submit again.

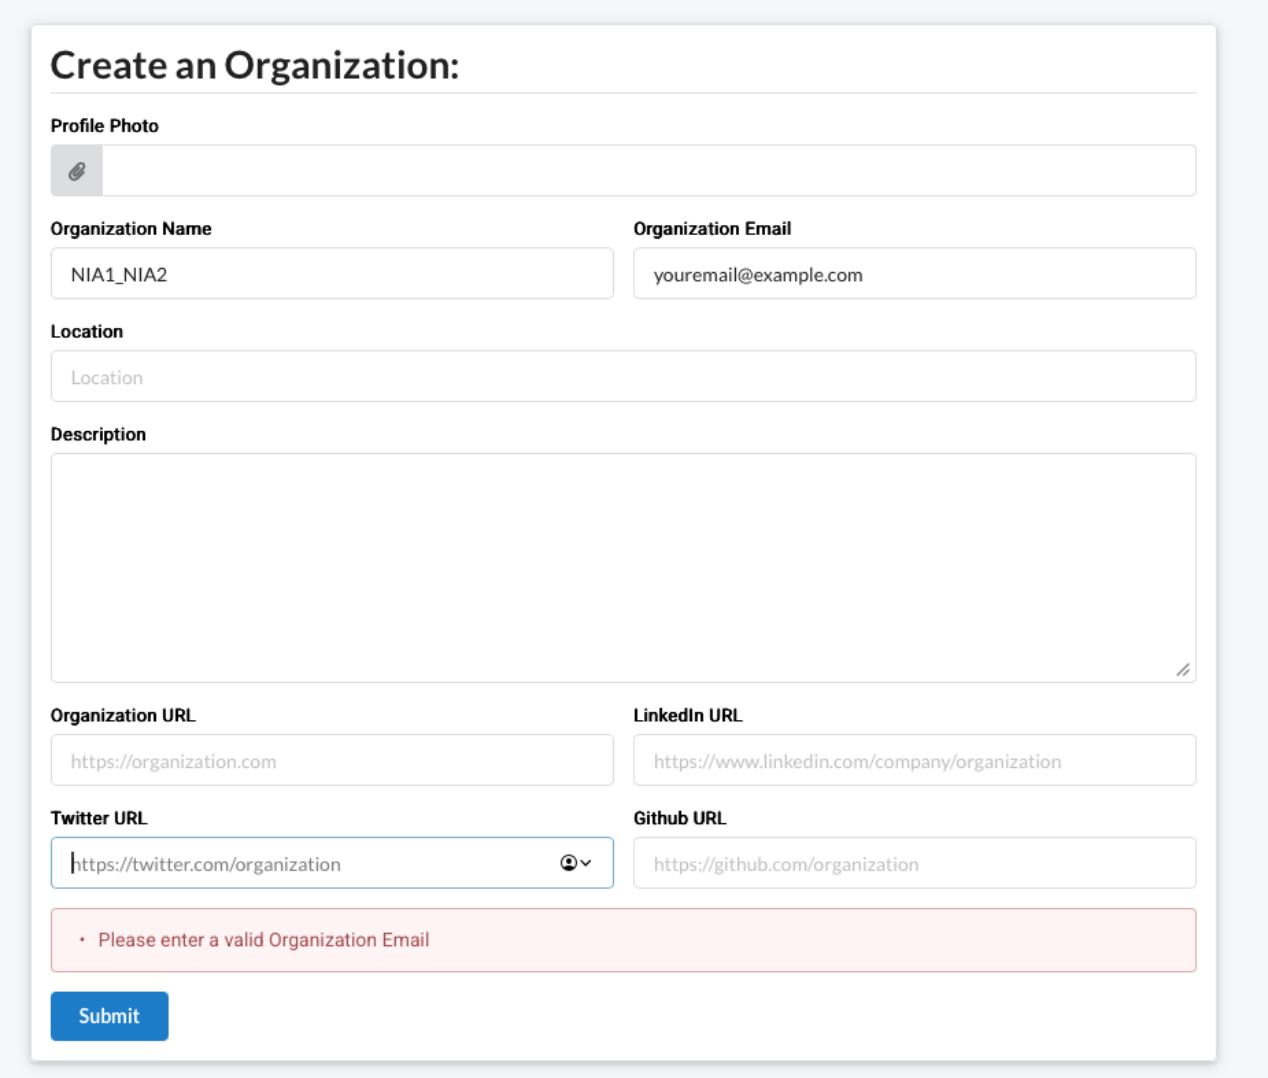

Figure 2. Complete the organization name and email, then click Submit.

3. CHECK THAT THE ORGANIZATION WAS CREATED

After creation, CodaBench opens the organization page. Check that the heading shows your correct **StudentID1_StudentID2** team name and that the contact email is correct.

The **Users** section initially lists the student who created the organization. This confirms that the organization exists, but you still need to add the second member of the pair.

Click **Edit Organization** to open the settings and user-management page shown in the next step.

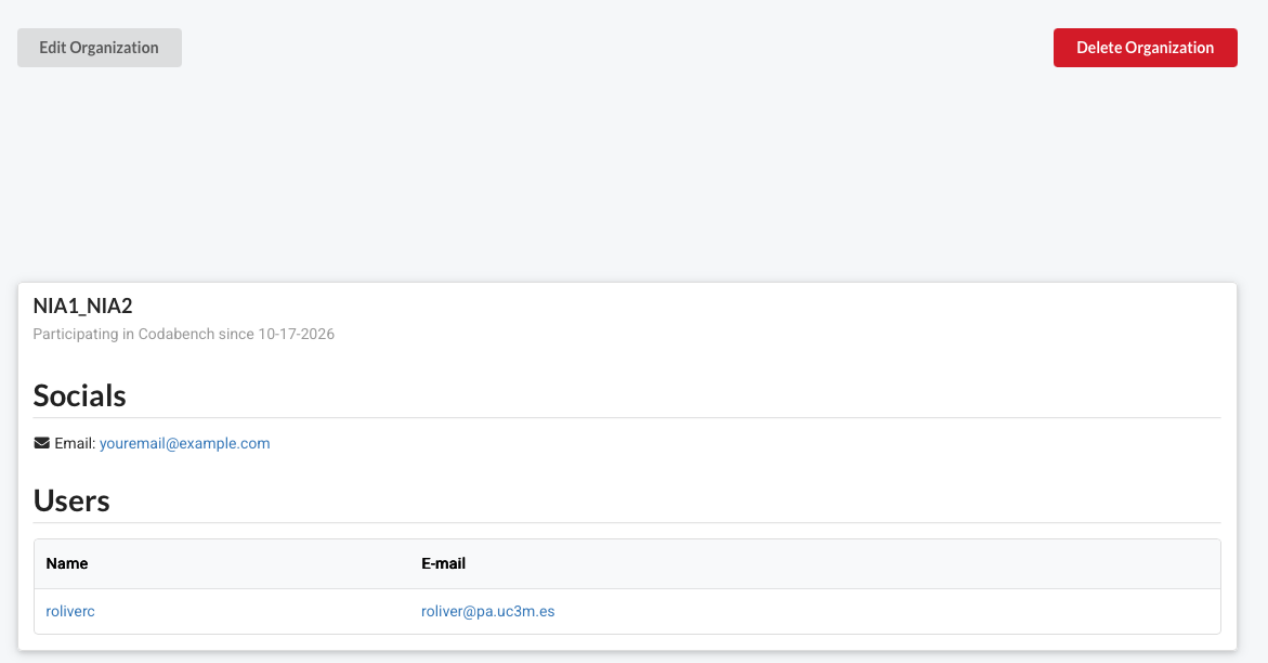

Figure 3. The organization page initially shows its creator in the Users section.

One organization per pair: your partner should join this organization, rather than create another one with the same IDs or with the IDs in reverse order.

4. ADD THE SECOND TEAM MEMBER

- On the edit page, go to **User Management** and click **Invite Users**.
- Use your partner's registered CodaBench account details in the invitation dialog and complete the invitation process. Your partner should sign in to their own account and complete any acceptance requested by CodaBench.
- Return to the organization page and verify that **both students** appear in its users list. The creator is initially shown as **Owner**. Creating the organization alone does not add your partner automatically.

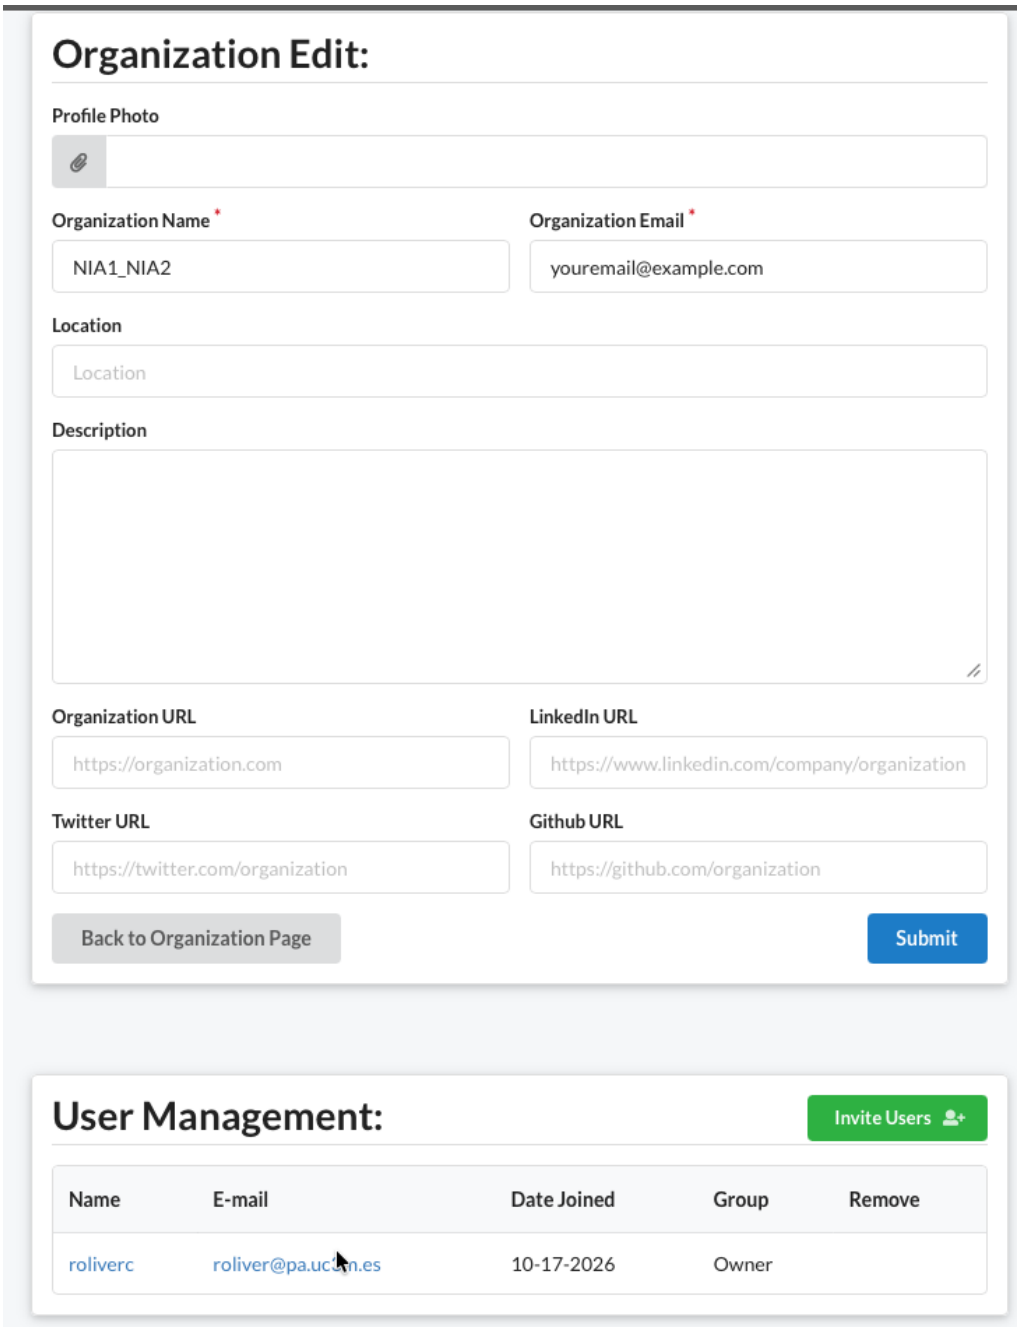

Figure 4. Use Invite Users in User Management to add your partner.

5. SUBMIT AS YOUR TEAM

- Open the Lab 4 competition and go to **My Submissions**.
- Before choosing a file, open **Submit as** and select your organization, **StudentID1_StudentID2**. For this pair project, select the team instead of **Yourself**. Check this selection before every upload.
- Click the paperclip and upload the prediction ZIP produced by your notebook. It must contain **output_custom.csv** and **output_ft.csv** directly at the ZIP root, without an enclosing folder.

If your organization is missing from the dropdown, first check that you are signed in to an account listed in that organization and that its invitation process is complete. Then refresh the competition page and check again.

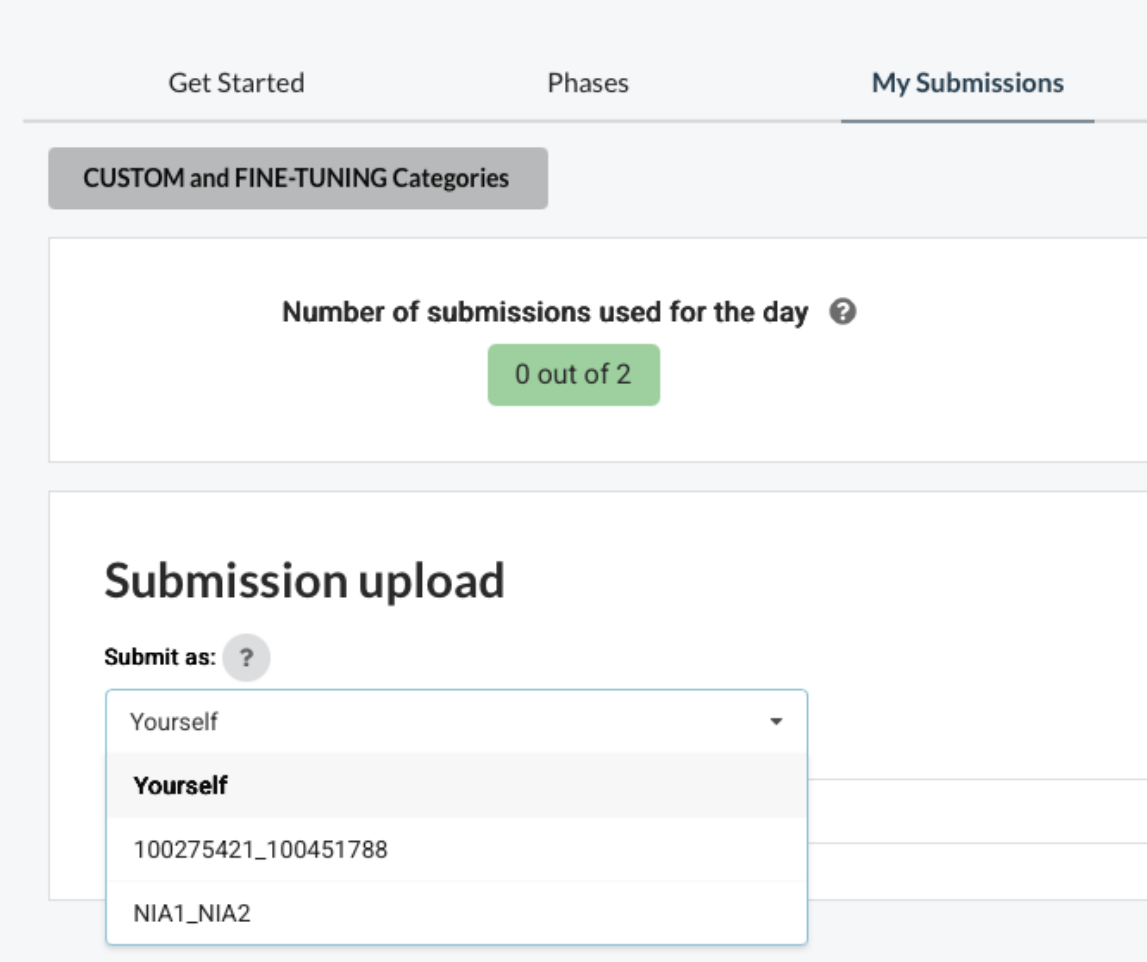

Figure 5. Choose your pair's organization in Submit as before uploading the ZIP.

Final check: the organization has the correct two student IDs, both students are members, and the correct team is selected for the upload. Use the same organization for both model categories and all team submissions.

The organization name identifies the pair in CodaBench. Naming a ZIP StudentID1_StudentID2 is not a substitute for selecting the organization under Submit as. Submit the report and notebook to **Aula Global** separately, as required in the project instructions.
